

## Managed Platforms Unit

The MPU is one of the School of Informatics' units of computing staff. It's responsible for the Linux platform which forms the basis of DICE. It also maintains the tools needed by that platform, principally LCFG.

## LCFG apacheconf component

I've recently been working on updating the apacheconf component to support Apache 2.4 on SL7. I think I now have it in reasonable shape and I'm not expecting any further major changes. The new version will be in the stable release on Wednesday 17th February.

The summary of the changes is on the [LCFG wiki](#). For reference the original list of ideas are [here](#). I've not spent any time (yet) on improving the nagios support. The multi-line verbatim support should be fine once I add the ¶ feature into the server as recently discussed.

I am planning to spend some time on improving the general documentation for the component including some basic recipes.

Any comments welcome. If you feel there is anything important I have missed out then now is your last chance to make suggestions for a while!

## LCFG apacheconf component

As discussed at the [LCFG Annual Review meeting](#) held in December we are

planning to start work on updating the apacheconf component for apache 2.4 fairly soon. We will also be generally refactoring the whole thing. There is a [wiki page](#) which holds a collection of ideas for new features that would be nice to have and bugs that should be fixed. I'm currently doing some exploratory work to decide how to approach this week so this is the last chance to make suggestions. Please either add them to the wiki page (tag them with your name please) or email them to me directly.
